HOLDING OPERATION - CASE STUDY

HELLO.ERP@IKONINFORMATIKA.HU

Providing Solutions to Help an Expanding Business

We believe we can provide advanced solutions that help businesses and individuals succeed in today's ever-changing world. Our solutions are designed to make life easier, more efficient, and more productive.

INDUSTRY: FINANCING, FLEET MANAGEMENT
THE CLIENT: NELSON GROUP

The Case

Nelson Group has been operating for over 25 years and is established in financing, fleet management, and real estate development. Fourteen companies cover the three main business areas are owned by Hungarian private entities, and are a dynamic and growing group of companies. The subsidiaries use different systems, which makes it difficult to track the status of the companies and manage the data in a uniform way. With the implementation of IKON ERP, the objective is to integrate the different systems so that the data of the 14 subsidiaries can be accessed on one central platform. This helps to ensure data transparency, as well as it enables real-time reporting and analysis.

Our Solution

Comprehensive Data Management

IKON helped integrate and standardise data from different companies and systems by developing the IKON ERP. With the implementation, the Nelson Group was able to monitor processes in real-time, which significantly improved decision-making.

The system's reporting has provided management with a comprehensive and accurate picture of the group's performance and enabled them to respond more quickly to market changes. The implementation has also reduced the administrative workload and increased the efficiency of employees, allowing them to focus on strategic tasks. We successfully migrated all relevant information from the previous systems to the IKON ERP. This process ensured that data was consistent and accessible to all pertinent business divisions. Thorough checks and clean-ups were carried out during the migration to minimise the possibility of inconsistencies in order to improve data quality. The Nelson Group has seen improvements in operational efficiency and financial performance following the implementation. Through reporting and data analysis, management can see the big picture, which has helped to increase the group's competitiveness.

The implementation of IKON ERP has not only made day-to-day operations smoother but has also ensured sustainable long-term growth for Nelson Group.

Business Case

Key Challenges

- Developing an ERP suitable for handling company groups
- Compliance with Hungarian accounting laws
- Set up work rules and automatizations
- Migration of several years of data from a previous system
- Interface development

Key benefits

- Ability to manage finance, invoices, cash desk, and fixed assets within one system
- One Partner master for all subsidiaries
- Separate invoicing and finance per subsidiary
- The data of the past migrated into the system
- Ready-to-use accounting module that meets the requirements in Hungary and Europe
- Multilingual support for the employees
- Multi-currency support for the statements

Increase Efficiency

- Managing companies with different profiles in one system
- European and Hungarian know-how
- The accounting module guides through all processes
- Revenue enhancement and strategic advice from statement analysis and potential audits

Data Analytics

- Customizable query and analytics
- Personalized workflow for all processes
- Automated e-mails and workflow notifications

SATISFIED CLIENTS

"The implementation of a new ERP is never an easy task for an SME, but we know that it is even more difficult to find a team that continues to develop and operate the chosen system years after implementation with the same enthusiasm as when it was delivered. We have now come to understand that this is due in large part to a solid professional and financial background and, not least, to the fact that the system can be developed much faster than other programming languages."

"It's reassuring to see all the important moments without having to ask colleagues for data. All this while feeling secure because of the precise authorisation and, above all, task management."

Information in companies is just a heap of data until it is used by business intelligence for decision-making. But this requires order in business, transparency in reporting, efficient back-office processes - with as few resources as possible. A good ERP system works under the hands of the CEO, and that's what we provide with IKON ERP®: optimised ERP for medium-sized companies with fast implementation and customised to the company.

Let's be honest: without a good ERP system, there is no sustainable company growth.
